NEW!

ORGANIZATIONAL DEVELOPMENT

This year, for the first time, the GOSH Conference offers a new track dedicated to exploring organizational development and culture and how these impact safety. The track presents concepts most appropriate for those whose organizations have undergone or are undergoing some safety maturation, but is designed for all audiences interested in learning how to embed safety into organizational culture. Participants in the track learn about the fundamentals of organizational culture, climate, and safety; and participants consider how developing a healthy work culture by eliminating the work-family divide reinforces the concept of safety as an organizational value.
